

PROPRIETA' RIGENERATIVA

Caso 1

- INVERTER CON PENDENZA < -1 ALLA SOGLIA LOGICA
- DISTURBO CHE NON FA CAMBIARE STATO

$$\delta_3 > \delta_2 > \delta_1$$

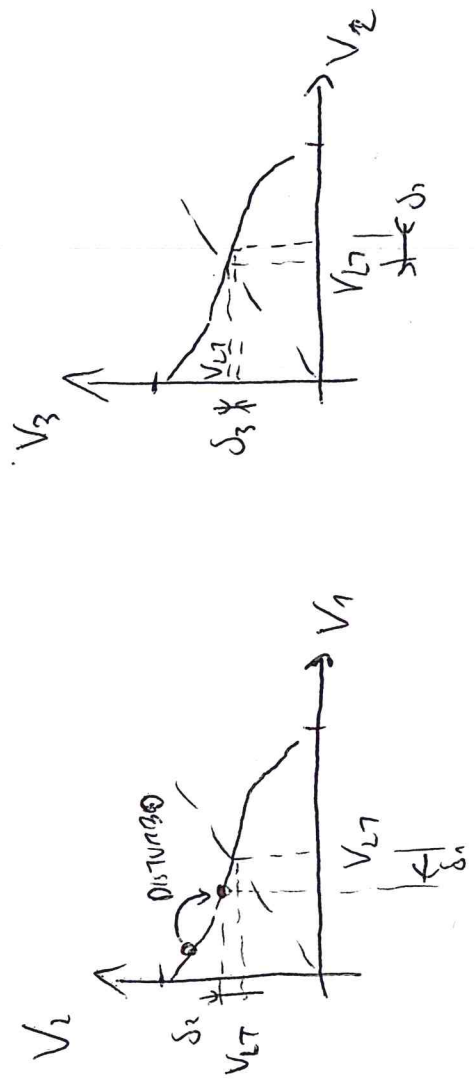

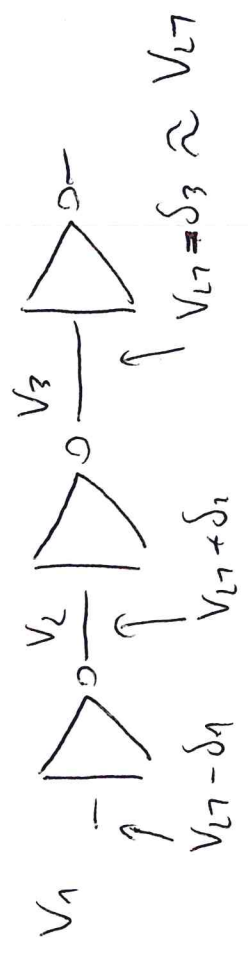

CI SPOSTIAMO SEMPRE PIU' LONTANO DALLA SOGLIA

Caso 2

- INVERTER CON PENDENZA ALTA
 SEGUN LOGICA > -1

MALE!

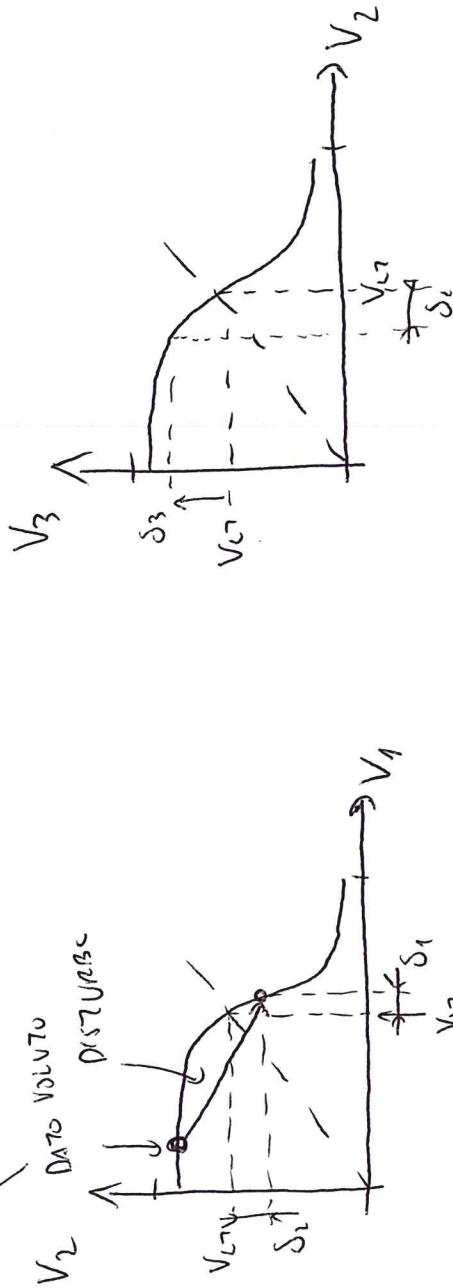

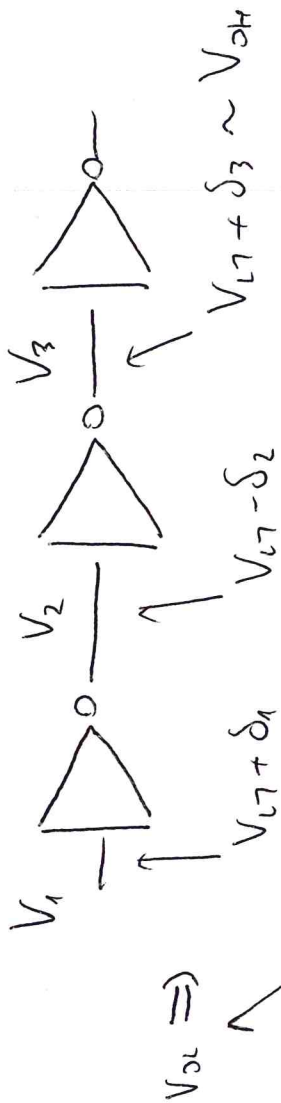

IL DATO DIVENTA
 INDEFINITO

$$\delta_1 > \delta_2 > \delta_3$$

Caso 3

- INVERTER COME NEL CASO 1 "PENDENZA < -1"
- DISTURBO "GRANDE"

$$\delta_3 > \delta_2 > \delta_1$$

CI SPEDIAMO DALLA SOLITA LOGICA
 MA PORTIAMO IL DISTURBO CHE ERA
 E CI STABILIZZIAMO SUL DATO CREATO
